

LOOPS

n

↳ FOR

↳ WHILE

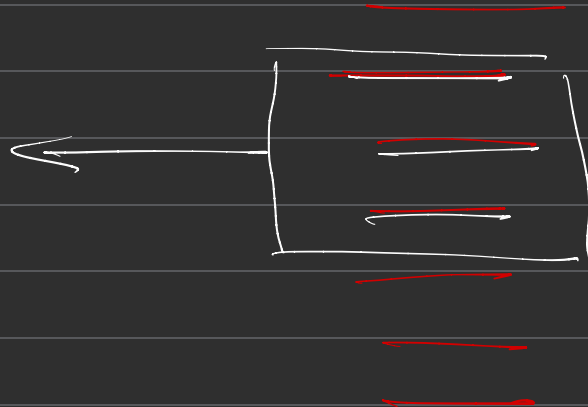

↳ REPEAT UNTIL

What is a loop?

A loop allows repeated execution of a block of code until a condition is met.

This prevents code duplication and handles repetitive task.

Block of
code

There are usually 3 types in every programming language

- ① For loop
 - ② While loop
 - ③ Repeat Until
- > most common loop

FOR loops

Def & Syntax

- used when the number of iterations are fixed
- For example printing first 10 number/
First 10 odd/even numbers

Syntax

FOR i ← start to End

↖ counter
↖ hamasha variable hai
↖ starting point
↖ Ending point

Q Print first 10 numbers

DECLARE i : INTEGER

i ← 0

11X FOR i ← 1 to 10 ^{syntax} ^{pre condition}

→ OUTPUT i

→ i ← i + 1 x 2 3 4 5 6 7 8 9 10 11

→ END FOR

Q Print first 10 numbers
starting from 20

DECLRE counter : INTEGER

counter ← 20

FOR counter ← 20 to 29

OUTPUT counter

counter ← counter + 1

END FOR.
